Existing Speed Conditions

Table 2 summarizes the existing speeds for the Gay Street corridor.

Table 2 - Existing Segment Traffic Volumes and Speeds

Segment	Direction	Traffic Volume (veh)		Speed (mph)	
		Approach	Segment	Average	85 th Percentile
Between Mason St and Main St	Eastbound	2,127	4,321	23.0	29.0
	Westbound	2,914		23.0	29.0
Between Mason St and Broad St	Eastbound	1,546	2,938	25.7	31.1
	Westbound	1,392		25.9	29.9

Note: Speed and associated volume data collected December 9, 2021, and November 4, 2021, respectively.

Average speeds fall close to or under the posted 25 MPH speed limit. However, the 85th percentile speeds were measured to be between 29 and 31 MPH. The higher 85th percentile speeds suggest there may be reconfiguration options worth exploring to reduce speeds.

Intersection Operations Analysis Summary

- Existing 2022 and projected 2040 ADTs for the study area indicate the segments are below capacity and will continue to be below capacity when reconfigured from a four-lane cross section to a two-lane cross section.
- Estimated 95th percentile queues do not exceed storage on proposed road reconfiguration affected approaches during both weekday AM and PM peak hours during existing and no-build 2040 conditions.
- Dedicated turn lanes east of Main Street are below capacity and are configured as trap lanes, forcing vehicles into lane changes to maintain through continuity on Gay Street in both westbound and eastbound directions.
- Gay Street/Liberty Street
 - Eastbound and westbound approaches experience LOS C or better during both weekday AM and PM peak hour conditions indicating spare capacity during existing and 2040 no-build conditions.
- Gay Street/Noll Drive – *Signalized*

- Eastbound and westbound approaches experience LOS C or better during both weekday AM and PM peak hour conditions indicating spare capacity for reduction in lane configuration during existing and 2040 no-build conditions.
- Gay Street/Main Street – *Signalized*
 - Eastbound and westbound approaches experience LOS C or better during weekday AM peak hour conditions indicating spare capacity for reduction in lane configuration during existing and 2040 no-build conditions.
 - Eastbound approach experiences LOS C or better during weekday PM peak hour conditions indicating spare capacity for reduction in lane configuration during existing and 2040 no-build conditions.
 - Westbound approach experiences LOS C or better during weekday PM peak hour conditions indicating spare capacity for reduction in lane configuration during existing conditions.
 - Westbound approach experiences up to LOS D during weekday PM peak hour conditions during no-build 2040 conditions.
- Gay Street/Mason Street - *Signalized*
 - Eastbound and westbound approaches experience LOS C or better during weekday AM peak hour conditions indicating spare capacity for reduction in lane configuration during existing conditions.
 - Eastbound approach experiences LOS C or better during weekday PM peak hour conditions indicating spare capacity for reduction in lane configuration during existing conditions.
 - Westbound approach experiences up to LOS D during weekday PM peak hour conditions during existing conditions. No changes to intersection capacity are expected with the road reconfiguration at Gay Street/Mason Street.
 - Eastbound and westbound approaches experience up to LOS D during weekday AM and PM peak hour conditions during no-build 2040 conditions. No changes to intersection capacity are expected with the road reconfiguration at Gay Street/Mason Street.
- Gay Street/Broad Street
 - Eastbound and westbound approaches experience LOS A during both weekday AM and PM peak hour conditions indicating spare capacity during existing and 2040 no-build conditions.
 - This intersection may be subject to potential gateway treatments without critical impacts to vehicular traffic.

Crash Summary

There were 79 reported crashes along Gay Street from January 2017-January 2022. **Figure 4** shows the distribution of crashes along the segment, revealing that most crashes occur near the signalized intersections. Other details from the crash report are summarized below. An overall breakdown of the crashes can be found in **Table 6**, and a summary of the crash severity can be found in **Table 6**.

Total	4	59	2	6	1	4	1	2	79
Percentage	5%	75%	3%	7%	1%	5%	1%	3%	100%

Review of crash types show approximately 75% of crashes are angle crashes. Broken out, 20 of the 25 Gay Street/Main Street intersection crashes are angle crashes, and 25 of the 29 Gay Street/Liberty Street intersection crashes are angle crashes. Angle crashes are commonly associated with intersections.

¹Crash Severity as coded by the KABCO scale defined by the VA Crash Report Manual (2016) where;
K = Dead, A = Serious Injury, B = Minor/Possible Injury, C = No Apparent Injury, O = No Injury (driver only)

Most crashes (80%) are reported as property damage only (PDO) and no fatalities have been reported in the 5-year crash history. Given the intersection concentration of crashes along the corridor, crash totals by intersection noted in **Table 8**.

In 2021, Liberty Street was reconfigured to a one-way southbound street south of Gay Street. This reconfiguration also includes a southbound bike lane on Liberty Street and parking on both sides. This intersection now has fewer conflict points and should mitigate the previous crash history. **Figure 5** shows a recent photo (December 2021) of the pedestrian improvements implemented at Liberty Street and Gay Street, looking southwest.

Figure 5 Liberty Street Pedestrian Improvements

Two (2) crashes have potential to be mitigated with a road reconfiguration as summarized in **Table 9**. *Crash history data can be found in Attachment C.*

Crash Doc. No. ¹	Crash Type ¹	Crash Description ¹	Road Reconfiguration Mitigation Potential
202635109	Sideswipe – Same Direction	Improper or unsafe lane change on West Gay Street.	Consolidation of vehicle flow one travel lane with dedicated turn lanes could provide clarity to vehicle movements on/off mainline.
202285006	Rear-End	Following Too Close	Reconfiguration would provide center left-turn lane for left-turning movements.

Recommendations

Based on the analysis and information above, the following are recommendations for the Gay Street corridor to improve safety, connectivity, and utilization of the existing pavement.

Road Reconfiguration

- A **road reconfiguration is recommended** on Gay Street between Main Street and Broad Street by reducing the typical section from four through lanes (both directions) to a single travel lane in each direction and two-way left-turn lane to accommodate turns at driveways and at intersections. This road reconfiguration is anticipated to improve safety and provide multimodal accommodations, minimally affecting traffic operations per the traffic analysis results.
 - Additionally, this recommendation is driven by reducing the weaving need between Main Street (Lee Highway) and Broad Street. Simplifying roadway positions and trajectory of through traffic is anticipated to improve safety by making movements more predictable.
- A different road reconfiguration is recommended on Gay Street between Liberty Street and Main Street by reducing the typical section from three through lanes (one westbound, two eastbound) to a single travel lane in each direction. This road reconfiguration is consistent with the STARS study recommendations and is anticipated to improve safety and provide multimodal accommodations, minimally affecting traffic operations per the traffic analysis results.
- Bike lanes are recommended to be considered to enhance multimodal connectivity and utilize space on the street from lane reduction.
- Existing and potential road reconfigurations are shown in **Figure 6** and **Figure 7**.
- An overall layout of the potential mitigations is shown in **Figure 8**.

Intersections

- Main Street Intersection
 - The reduced cross section west of Main Street and therefore will require further review as to how the lane configurations can transition to the proposed reconfiguration to the east, including bicycle accommodations.
 - The intersection at Main Street should review the following:
 - Eastbound left turn operation whose sight distance is obscured by an existing structure on the north west corner.
 - Westbound right turn movements will need to consider conflicts with bicyclists.
- Main Street and Noll Drive Intersections
 - Explore combined signalization with phased overlaps at these signals, consistent with the STARS study recommendations.
- Broad Street Intersection
 - The intersection at Broad Street is a clear transition in roadway environment and should consider gateway-type treatments to transition from the commercial fronted segments to the west and the residential fronted segments to the east.

¹Analysis used HCM 2000 signal capacity methodology

- 95th percentile volume exceeds capacity; queue may be longer.

Road Reconfiguration Operations Analysis Summary

- Estimated 95th percentile queues do not exceed storage on proposed road reconfiguration affected approaches during both weekday AM and PM peak hours during 2022 and 2040 conditions, except:
 - During 2040 PM peak hour conditions assuming a single controller, the eastbound approach of Gay Street/Main Street has an estimated 95th percentile queue of 225 feet. The existing storage of this short segment is 200 feet. Given these queues are expected to minimally exceed storage under 2040 PM peak hour conditions, it is recommended that this improvement be implemented and reassessed as is traffic growth is observed.
- Proposed signal timing changes at Gay Street/Noll Drive include a single controller with eastbound/westbound movements phased using overlaps to reduce queuing between the intersections, like a diamond interchange.
- Gay Street/Liberty Street
 - Eastbound and westbound approaches experience LOS D or better during both weekday AM and PM peak hour conditions in 2022 and 2040 conditions.
- Gay Street/Noll Drive – *Signalized (assuming proposed signal timing/phasing changes)*
 - Eastbound and westbound approaches experience LOS D or better during the weekday AM peak hour conditions in 2022 and 2040 conditions.
 - Eastbound and westbound approaches experience LOS C or better during the weekday PM peak hour conditions in 2022 and 2040 conditions.
 - Under the *existing signal configurations*, the road reconfiguration also operates acceptably under 2022 and 2040 operations.
- Gay Street/Main Street – *Signalized (assuming proposed signal timing/phasing changes)*
 - Eastbound and westbound approaches experience LOS C or better during both weekday AM and PM peak hour conditions in 2022 and 2040 conditions.

- Under the *existing signal configurations*, the road reconfiguration also operates acceptably under 2022 and 2040 operations, except:
 - The eastbound Gay Street queue exceeds 200 feet in the 2040 PM conditions.
- Gay Street/Mason Street - *Signalized*
 - Eastbound and westbound approaches experience LOS D or better during the weekday AM peak hour conditions in 2022 and 2040 conditions.
 - Eastbound and westbound approaches experience LOS C or better during the weekday PM peak hour conditions in 2022 and 2040 conditions.
- Gay Street/Broad Street
 - Eastbound and westbound approaches experience LOS B or better during both weekday AM and PM peak hour conditions in 2022 and 2040 conditions.
