Project Description

The City of Harrisonburg plans to install a rainwater collection system to collect rainwater from a portion of the Public Works Fleet Building roof. Therefore, it is the intent of this Request for Proposals (RFP) to solicit proposals from responsible and responsive contractors to provide all work (design, material, and labor) to install the rainwater collection system.

The contractor shall provide all labor, supervision, equipment, tools, materials and incidentals necessary to design, furnish, and install a rainwater harvesting system that will be used to fill the Department's street sweeper, flush truck and/or similar equipment with collected rainwater. All equipment, materials and installation work shall comply with this specification, the Virginia OSHA Standards, and the Virginia Uniform Statewide Building Codes. The system is for non-potable uses.

Bidder shall provide clear documentation and information to demonstrate that they are capable of designing and installing a rainwater harvesting system meets the needs specified herein. Bidder shall provide documented client references with contact names and phone numbers, number of years using the harvesting system, and for what the harvested rainwater is used for.

This project is funded by a grant from the Virginia Department of Conservation and Recreation (VA DCR) and must be completed and have final invoices submitted to the City of Harrisonburg no later than June 30, 2012. However, the City recognizes that there may be system components that require special ordering and additional time to complete the project. If additional time is required or anticipated, the contractor shall describe in the proposal what system components might need to be installed after June 30, 2012 and provide a breakout cost estimate. The City and contractor will negotiate the schedule and terms following the selection of the contractor.

- A. Background on the Fleet Maintenance Building:
 - 1. The building is a 100-ft. x 100-ft. steel building with a gable roof that drains in two directions. Photo in Figure 1.
 - 2. There are six (6) downspouts on the west side, and six (6) downspouts on the east side of the building.

 - 3. The tank will be above ground, food grade, constructed of fiberglass or UV resistant polyethylene. Tanks should not allow penetration of sunlight. Tank should have a tight-fitting lid that allows access for cleaning.
 - 4. A filter will be needed to provide water that is free of debris to street sweeper, flush truck and like equipment.
 - 5. The system should have a minimum 50 gpm transfer pump with an outlet connection equipped with 2 ½" National Standard Threads.
 - 6. The system should include an overflow connection into the storm sewer system.
 - 7. To system should include a tank water level transmitter. The City would like to consider wireless or other options recommended by the Contractor.

 - 9. Installation work shall include removal of all trash and debris from construction.

- C. Additional notes:
 - 1. There shall be a warranty of 1 year on labor and 2 years all parts.
