<span style="background-color: #80c080; border: 1px solid black; padding: 2px 5px;"></span>	Recommended Traffic Calming Study
<span style="background-color: #ffffcc; border: 1px solid black; padding: 2px 5px;"></span>	Automatically Reconsidered in 2027 Round
<span style="background-color: #d9e1f2; border: 1px solid black; padding: 2px 5px;"></span>	Speed and Volume Data will expire, must be re-requested for 2027 Round
<span style="background-color: #e0e0ff; border: 1px solid black; padding: 2px 5px;"></span>	Ineligible due to scoring under 40 points, can be reconsidered in 3 years

### Additional Considerations Points Breakdown

5 points assigned if street has no existing traffic calming (physical measures)

5 points assigned if street contains a hill (5%-10% over 250 ft)

5 points assigned if street is within a disadvantaged census block (LMI or Economic Justice tool)

2 points assigned for every 1000 feet between or without existing physical traffic control measures, stop control devices, or speed impeding curve

1 point assigned for every additional 500 feet over 1000 feet between or without existing physical traffic calming measures, stop control devices, or speed impeding curve

### Why were streets with higher score totals not selected for the 2026 round?

Although some streets received higher scores, the selected streets were chosen to optimize city resources. Implementing traffic calming measures on adjacent streets that scored well reduces study time and mobilization costs, allowing for more improvements to be installed overall. High-scoring streets not selected in the 2026 round will be automatically reconsidered in future rounds unless otherwise indicated.
